Developmental.

Assessment designed to measure the integration of visual perception and motor behavior.

The Beery VMI helps assess the extent to which individuals can integrate their visual and motor abilities. The Short Format and Full Format tests present drawings of geometric forms arranged in order of increasing difficulty that the individual is asked to copy. The Short Format is often used with children ages 2 years to 8 years. The Beery VMI series also provides supplemental Visual Perception and Motor Coordination tests, which use the same stimulus forms as the Short Format and Full Format tests. These optional assessments are designed to be administered after results from the Short Format or Full Format test show the need for further testing, to help compare an individual's test results with relatively pure visual and motor performances. (One or both of the supplemental tests may be used.) A statistical comparison of results from all three tests can be quickly and easily made on the graphic profile provided in the test booklets.

Assessment designed to measure the integration of visual perception and motor behavior by testing a subject's ability to copy a geometric form with paper and pencil.

Assessment designed to measure the integration of visual perception and motor behavior.

Revised to incorporate the latest advances in the neurosciences and clinical neurology, the Seventh Edition of this classic text provides practical, cost-effective problem-solving approaches to all diseases affecting the developing nervous system. In clinically relevant terms, the book explains how recent developments in molecular biology, genetics, neurochemistry, neurophysiology, neuropathology, and neuroimaging impact on diagnosis and treatment. Chapters focus on specific disorders or groups of disorders and emphasize differential diagnosis, disease course, treatment, and prognosis. This edition has a new chapter on mitochondrial cytopathies.
