L'Arte del Restauro L'arte del legno e la capacità dei maestri artigiani di oggi nel rriporporre azioni e saper fare del Rinascimento. La "tarsia" è una tecnica straordinaria che riesce a "dipingere" con il legno, attraverso l'utilizzo sapiente di forme e essenze diverse. Ripercorreremo questa tecnica di lavorazione immutata nel tempo tramite un laboratorio presso un artigiano specializzato.

L'arte del restauro - Piva, Gino | 9788920300456 | Amazon ... Mi chiamo Carlo Ferrari e da oltre trent'anni pratico la nobile arte del restauro dei mobili antichi. La storia della mia vita è la storia di una ricerca. La ricerca della conoscenza del fare: fare nei tempi e nei modi dovuti, fare come si deve, "fare a regola d'arte". Per anni ho frequentato le botteghe di grandi maestri artigiani dove un sapere antico e dimenticato era pratica ...

Conservation of Easel Paintings, Second Edition provides a much-anticipated update to the previous edition, which has come to be known internationally as an invaluable and comprehensive text on the history, philosophy and methods of the treatment of easel paintings. Including 49 chapters written by more than 90 respected authors from around the world, this volume offers the necessary background knowledge in technical art history, artists' materials and scientific methods of examination and documentation. Later sections of the book provide information about the varying approaches and methods for treatment and issues of preventive conservation, as well as valuable reflections on storage, shipping, and exhibition. Including exciting developments that have taken place since the last edition was published, the book also covers new techniques of examination, especially MacroXRF scanning and Reflectance Transmission Imagery. Drawing on research presented at recent professional conferences, information about innovative methods for cleaning modern and contemporary paintings and insights into modern oil paints is also included. Incorporating the latest regulations and understanding of health and safety practices and integrating theory with practice throughout, Conservation of Easel Paintings, Second Edition will continue to be an indispensable reference for practicing conservators. It will also be an essential resource for students taking conservation courses around the world.

Informed by systems thinking, this book explores new perspectives in which culture and management are harmoniously integrated and cultural heritage is interpreted both as an essential part of the social and economic context and as an expression of community identity. The combination of a multidisciplinary approach, methodological rigor and reference to robust empirical findings in the fertile field of analysis of UNESCO's contribution mean that the book can be considered a reference for the management of cultural heritage. It casts new light on the complex relation of culture and management, which has long occupied both scholars and practitioners and should enable the development of new pathways for value creation. The book is based on research conducted within the framework of the Consorzio Universitario di Economia Industriale e Manageriale (University Consortium for Industrial and Managerial Economics), a network of universities, businesses and public and private institutions that is dedicated to the production and dissemination of knowledge in the field. This volume will be of interest to all who are involved in the study and management of the cultural heritage.

Conservation of Easel Paintings is the first comprehensive text on the history, philosophy and methods of treatment of easel paintings integrating theory with practice. A guide to necessary background knowledge in technical art history, artists' materials, interviews with artists, scientific methods of examination and documentation precedes sections that present varying approaches and methods for treatment. This book concludes with the history and treatment of frames and a section featuring issues of preventive conservation, storage, shipping, exhibition, display, wall colours, and lighting. Extensive bibliographies at the end of each section point readers to additional resources. Conservation of Easel Paintings will be of use in the training of conservation students and will provide generations of practicing paintings conservators and interested art historians, curators, directors, collectors, dealers, artists, and students of art and art history with valuable information.

Structural Analysis of Historical Constructions contains about 160 papers that were presented at the IV International Seminar on Structural Analysis of Historical Constructions that was held from 10 to 13 November, 2004 in Padova Italy. Following publications of previous seminars that were organized in Barcelona, Spain (1995 and 1998) and Guimarães, Portugal (2001), state-of-the-art information is presented in these two volumes on the preservation, protection, and restoration of historical constructions, both comprising monumental structures and complete city centers. These two proceedings volumes are devoted to the possibilities of numerical and experimental techniques in the maintenance of historical structures. In this respect, the papers, originating from over 30 countries, are subdivided in the following areas: Historical aspects and general methodology, Materials and laboratory testing, Non-destructive testing and inspection techniques, Dynamic behavior and structural monitoring, Analytical and numerical approaches, Consolidation and strengthening techniques, Historical timber and metal structures, Seismic analysis and vulnerability assessment, Seismic strengthening and innovative systems, Case studies. Structural Analysis of Historical Constructions is a valuable source of information for scientists and practitioners working on structure-related issues of historical constructions

Architectural heritage is now recognised to be of great importance to the historical identity of a region, town or nation. In order to take care of that heritage, we need to look beyond borders and share experiences and knowledge regarding heritage preservation. This book contains papers covering the latest advances in this field, presented at the twelfth and latest in a series of now-biennial conferences that began in 1989. The series is recognised as the most important conference on the topic. It covers such topics as Heritage architecture and historical aspects, Regional architecture, Preservation of archaeological sites, Maritime heritage, Heritage masonry buildings, Adobe restorations, Wooden structures, Structural issues and restoration, Seismic vulnerability and vibrations, Assessment, retrofitting and reuse of heritage buildings, Surveying and monitoring, Material characterisation and problems, Simulation and modelling, New techniques and materials, Non-destructive techniques, Experimental validation and verification, Performance and maintenance, Environmental damage, Social and economic aspects, and Guidelines, codes and regulations.

The word conservation, when used in the context of the preservation of built heritage, implies an intrinsically complex concept that evolved over time, since it has been influenced by the perception of history throughout time. This volume emphasises why an understanding of the cultural evolution of the conservation approach must be considered a prerequisite for architects and engineers if they are to cooperate in full harmony with historic-artistic culture for the preservation of global built heritage. In particular, the volume highlights how, during the second half of the last century, the preservation process also involved engineering – the science of making practical applications of knowledge – which, for a long time, made an uncritical use of techniques and materials and devised interventions on historical heritage that were heavily invasive. The volume also devotes special attention to the problems related to seismic risk, to which Italy, Greece and Portugal are particularly prone. Problems that emerge during the crisis and reconstruction phases are dealt with in detail, as is scheduled maintenance, as this latter approach always constitutes an improvement in the performance of the monument and is the most appropriate tool for the conservation of the built heritage. Finally, the volume collects examples of building restoration with case studies of many outstanding monuments. The work will appeal to professionals and academics in the broader fields of civil engineering (both geotechnical and structural engineering), architecture, art history, the history of architecture, restoration and cultural heritage management. This book will: Provide a critical reading of the history of conservation; Discuss materials and techniques of ancient architecture; Cover seismic vulnerability and preservation of the historic integrity of the monument; Advocate an approach based on programmed maintenance; Feature numerous case histories, including St. Mark's Basilica in Venice and the complex restoration of the cathedral of Notre-Dame in Paris.

Robert Lehman and his father, Philip Lehman, purchased textiles with the same well-trained eyes they used to acquire paintings, drawings, and decorative arts in general. This volume catalogues the more than 250 textiles and objects made of fabric that were part of Robert Lehman's bequest to The Metropolitan Museum of Art in 1975. Many of these textiles were used as hangings, covers, or upholstery to embellish the Lehmans' elegant town house in Manhattan. They represent sixty-five years of assembling, owning, and living with historic fabrics on a day-to-day basis, and for scholars and laymen alike they document an American style of living and interior decoration that has largely disappeared. Among the most distinguished and historically significant objects in the Robert Lehman Collection are four large tapestries, including the Last Supper after Bernaert van Orley that is arguably the finest Renaissance tapestry in an American collection, and two series of embroidered roundels from fifteenth-century Flanders that illustrate episodes from the lives of Saint Martin and Saint Catherine of Alexandria. The Collection also includes a great number of ecclesiastical vestments and panels of magnificent silks and velvets in a vast array of techniques and styles that span six centuries.

The book presents for the first time the restoration of Amundsen's glass slides, one of the most beautiful collections of slides in the world. The 248 slides are the photographic testimony of three great explorations: the Northwest Passage (1903-1906), the conquest of the South Pole (1910-1912) and the Maud expedition (1918-1925). Discovered by chance in 1986, the slides were restored in 2009 by Pietro Librici at the National Library of Norway, in a continuous cooperation with the institute team. The restoration is presented analytically in its methodological, technical, scientific and operational aspects, constituting an updated model of intervention. Critical historical studies that accompanied the restoration and the expressive features of the slides have also led the author to identify Amundsen's own style which lies between documentary photography and photographic documentation and make the book a particular opportunity to immerse in the charm of polar expeditions, in the first years of the 20th century when the poles were the only areas of terra incognita left on the world map.
