Maritime navigation has rapidly developed since the publication of the last edition of the title with methods of global position fixing for shipping becoming standardized. As in the previous two editions, this edition will provide a sound basis for the understanding of modern navigation systems and brings the student or professional up-to-date with the latest developments in technology and the growing standardization of maritime navigation techniques.

Developed with close scrutiny from the US Merchant Marine Academy and the major maritime navigation centres in the UK, out-dated techniques have been replaced by an expanded section on the now standard Navstar GPS systems and the Integrated Nav. In addition, a new chapter on the application of electronic charts will also be included, as well as problems at the end of each chapter with worked solutions.

These procedures provide recommendations that are designed to accompany a ship's Safety Management System (SMS) regarding the use of ECDIS for navigation, route planning and at sea on passage.

In the raw was how the world felt now. My feelings were raw, my thoughts were raw and hurtful like knife blades. . . . In the blue had been my place to hide, now In the raw there was nowhere to hide. Jenna Abbott separates her life into two categories: before the wreck and after the wreck. Before the wreck, she was leading a normal life with her mom in suburban New York. After the wreck, Jenna is alone, trying desperately to forget what happened that day on the bridge. She's determined not to let anyone get close to her -- she never wants to feel so broken and fragile again. Then Jenna meets Crow. He is a powerfully seductive enigma, and Jenna is instantly drawn to him. Crow is able to break down the wall that Jenna has built around her emotions, and she surprises herself by telling him things she hasn't told anyone else. Can Jenna bring herself to face the memories she's tried so hard to erase?

This book captures the state of the art in cloud technologies, infrastructures, and service delivery and deployment models. The work provides guidance and case studies on the development of cloud-based services and infrastructures from an international selection of expert researchers and practitioners. Features: presents a focus on security and access control mechanisms for cloud environments, analyses standards and brokerage services, and investigates the role of certification for cloud adoption; evaluates cloud ERP, suggests a framework for implementing “ big data ” science, and proposes an approach for cloud interoperability; reviews existing elasticity management solutions, discusses the relationship between cloud management and governance, and describes the development of a cloud service capability assessment model; examines cloud applications in higher education, including the use of knowledge-as-a-service in the provision of education, and cloud-based e-learning for students with disabilities.
