Total magnification of a specimen, using your microscope, with the 40x objective in place? working distance decreases as the magnification increases Relationship between working distance and magnification of the objective? a lens on a microscope that stays in focus when the magnification is changed

*Microscope Lab Questions Flashcards | Quizlet*  
The total magnification of the microscope is equal to the magnification of the ocular multiplied by the magnification of the objective. If you are using the 4x objective and the 10x ocular the total magnification would be 4 x 10 = 40x. A specimen which is actually 1mm in size would appear to be 40mm in size when viewed through the microscope.

*805 MICROSCOPE LAB ANSWERS - John Abbott College*  
The total magnification of the microscope is equal to the magnification of the ocular multiplied by the magnification of the objective. If you are using the 10x objective and the 10x ocular the total magnification would be 10 x 10 = 100x. A specimen which is actually 1mm in size would appear to be 100mm in size when viewed through the microscope.
