Research on the microbial colonization of the aerial and subterranean tissues of plants has shown an extensive scale of interactions between the hosts and a range of microbes, including bacteria and fungi. Intercellular spaces, vascular systems and even single cells can be inhabited by these endophytic microbes. Of the bacterial endophytes, only a small percentage is harmful to the plant; most are neutral, opportunistic or beneficial. These plant-based bacteria can have various important functions throughout the life cycle of the plant; some promote plant growth and development, others protect the plant from diseases. This ability to be able to protect plants from diseases has catalyzed numerous laboratories to search for new bacteria that could be utilized instead of the traditional plant-protective agents. Because two or more interacting organisms are involved, research and the eventual application of suitable bio-controlling microbes are challenging and often require specific skills and equipment. The purpose of this book is to provide a comprehensive review for those who are interested in the research and biotechnological applications of plant-associated bacteria. It also provides a compilation of current work conducted on plant-bacteria interactions.

The ABC of the Histology is intended to convey basic knowledge of human tissues by images analysis, using the standard technique of staining haematoxylin-eosin (H&E). The approach of the book is to simplify the concepts of a knowledge area somewhat difficult to convey, by analyzing 134 images, selected for the purpose of highlighting the fundamental concepts of Histology. In summary, the ABC of the tissues, which can be read and summarized in few hours. New chapters in this edition with inflammatory pathology, introduction to tumor pathology and immunohistochemical technique. Includes practical exercises

In this provocative thriller, forensic expert Kay Scarpetta is surrounded by familiar faces, yet traveling down the unfamiliar road of fame.... It is the week before Christmas. A tanking economy has prompted Dr. Kay Scarpetta—despite her busy schedule and her continuing work as the senior forensic analyst for CNN—to offer her services pro bono to New York City ’ s Office of the Chief Medical Examiner. In no time at all, her increased visibility seems to precipitate a string of unexpected and unsettling events, culminating in an ominous package—possibly a bomb—showing up at the front desk of the apartment building where she and her husband, Benton, live. Soon the apparent threat on Scarpetta ’ s life finds her embroiled in a surreal plot that includes a famous actor accused of an unthinkable sex crime and the disappearance of a beautiful millionaire with whom her niece, Lucy, seems to have shared a secret past. Scarpetta ’ s CNN producer wants her to launch a TV show called The Scarpetta Factor. Given the bizarre events already in play, she fears that her growing fame will generate the illusion that she has a “ special factor, ” a mythical ability to solve all her cases. She wonders if she will end up like other TV personalities: her own stereotype.

Nowadays, assisted reproductive technologies (ARTs) have a pivotal role not only in achieving fertilization in subfertile animals, but they are also involved in the management of the herd, decreasing disease spread and even allowing offspring sex selection. Nonetheless, there are differences between species or even within species that have led researchers worldwide to focus on those differences in order to bypass these specific difficulties. This Special Issue, titled “ The Era of Assisted Reproductive Technologies Tailored to the Specific Necessities of Species, Industry and Case Reports ” and published in *Animals*, is composed of 12 original manuscripts and three reviews that offer an overview of current and future ARTs used to improve reproductive outcomes, mainly focused on farm animals, such as horse, pig, bovine, rabbit and ovine species. Thus, the Special Issue covers information from the classical point of view, including comparative studies of different semen extenders, to the most advanced technologies of sperm selection by thermotaxis or chemoattractants, as well as the improvement of sperm features by red light irradiation. The female and embryo contributions to ART outcomes are also covered, for instance, with a study that improves our knowledge by the metabolomic description of follicular fluid composition or the description of better culture conditions of oocytes. In brief, this Special Issue provides a balanced overview of emerging techniques and technologies used to preserve, improve, rescue or even create fertility for domestic farm animals with high economic impact.

This book is a printed edition of the Special Issue "Current Knowledge in Thyroid Cancer—From Bench to Bedside" that was published in *IJMS*

Functional Pavement Design is a collections of 186 papers from 27 different countries, which were presented at the 4th Chinese-European Workshops (CEW) on Functional Pavement Design (Delft, the

# Read PDF Olympus Bx41 Microscope Manual

Netherlands, 29 June-1 July 2016). The focus of the CEW series is on field tests, laboratory test methods and advanced analysis techniques, and cover analysis, material development and production, experimental characterization, design and construction of pavements. The main areas covered by the book include: - Flexible pavements - Pavement and bitumen - Pavement performance and LCCA - Pavement structures - Pavements and environment - Pavements and innovation - Rigid pavements - Safety - Traffic engineering Functional Pavement Design is for contributing to the establishment of a new generation of pavement design methodologies in which rational mechanics principles, advanced constitutive models and advanced material characterization techniques shall constitute the backbone of the design process. The book will be much of interest to professionals and academics in pavement engineering and related disciplines.
