Focusing on black and white photos, this book looks at both the camera and techniques needed to capture good images, as well as the digital processing that can be applied. As the digital camera market is saturated with all-in-one-book titles, the market is large enough and ready for books that concentrate on specific areas of photography. Black and white is the first area aspirant photographers express an interest in. With so many enthusiasts, this book will fill a niche in this growing market. Black and white is regarded as a significant photographic skill, even an art, so it merits a completed book dedicated to the unique skill requirements. Spanning the topic from capturing photos through to the latest information on digital printing and DVD burning, this book provides amateurs with a solid foundation. The digital focus of this book is comprehensive, including both recreation of traditional effects and all-new digital techniques. It approaches black and white photography from a practical, tutorial view, not just an artistic view, so that readers benefit from an understanding of all perspectives—an important factor in the competitive arena of digital photography.

Landscape photography is a popular photographic genre—and for good reason. The great outdoors is an ever-ready subject. It is variable, as well; it is affected by changing light, decomposition, weather, human interaction, and myriad other factors. Its features range from natural to manmade elements—and many landscapes are comprised of both. Photographers who point their camera's lens at a scene do so in an effort to communicate their feelings about the landscape. Rather than simply document the scene, they seek to capture the spirit of place—perhaps to tell a story or depict a mood. They aim to share with viewers the ways in which the scene speaks to them. Accomplishing these goals may seem simple at the outset, but the task is rife with challenges. In this book, Gary Wagner shows readers how to create powerful, evocative black & white landscape photographs filled with beautiful light, a full range of tones, and exquisite detail. Beginning with a look at the gear you'll need to get the best-possible images, Wagner covers cameras, lens types, tripods, and filters. He then discusses the postproduction processes he uses to enhance his images, producing breathtaking photographic records of natural and man-altered locales. Following a run-through of the basic tenets of landscape photography, Wagner presents 60 of his favorite images for review. Readers will find images in six categories: (1) Lakes and Streams, (2) Trees and Rocks, (3) Coastal Seascapes, (4) Winter, and (5) Man-Altered Landscapes. This presentation model allows readers to focus on the aspects of landscape photography that most appeal to them or challenge them most. With each image presented, readers will learn the strategies that went into conceptualizing and creating the shot—from exposure, to composition, to postproduction, and more. With information on every aspect of creating striking, moving landscape images—from choosing gear, to studying light, to calculating ideal exposures, to composing images, to retouching/manipulating the images for breathtaking results, to setting up your workflow to ensure that the printed/output image meets the strictest criteria, this book will prove indispensable to photographers new to landscape photography or those seeking to take their image creation to a whole new level.

Digital Negatives with QuadToneRIP is a text that fully explores how the QuadToneRIP printer driver can be used to make expert digital negatives. The

book takes a comprehensive, "under-the-hood" look at how Roy Harrington's QTR printer driver can be adapted for use by artists in several different creative practice areas. The text is written from the Mac/Photoshop point of view. The book is divided into three parts. Part One is a step-by-step how-to section that will appeal to both beginning and more advanced practitioners. Part One includes quickstart guides or summary sheets for beginning students who want to jump into using QTR before understanding all of its functional components. Part Two addresses dimroom, darkroom, and printmaking practices, walking the reader through brief workflows from negative to print for lithium palladium, gum bichromate, cyanotype, salted paper, kallitype, silver gelatin and polymer photogravure, with a sample profile for each. It also includes an introduction to a new software iteration of QTR: QuickCurve-DN (QCDN). Part Three is devoted to contemporary practitioners who explain how they use QTR in their creative practice. The book includes: A list of supplies and software needed A summary QTR glossary with a simple explanation of how each function works A sample walk-through to create a QTR profile from start to finish How to linearize profiles with simple to more exacting tools A visual guide to modifying functions Quickstart guides for many of the workflows Instructions for crafting monochrome, duotone, tricolor, and quadcolor negatives Instructions for using QTR to print silver gelatin in the darkroom Instructions for using QTR to print alternative processes in the dimroom Instructions for using QTR to print polymer photogravure in the printmaking room Introductory chapter to QuickCurve-DN software Troubleshooting common QTR problems Generic starter profiles for processes discussed Contemporary artists: their work and QTR process. Learning how to craft expert digital negatives can be a bit overwhelming at the outset. Digital Negatives with QuadToneRIP makes the process as user-friendly as possible. Like other books in the series, Digital Negatives with QuadToneRIP is thoroughly comprehensive, accessible to different levels of learner, and illustrative of the contemporary arts.

In just a few decades, economy and society have been digitalized. At any time every citizen can be informed of what is happening all over the world and he is "online" 24/7. All this has enormous effects on the way in which societies are functioning. The physical world of everyday life is no longer the decisive entity, but the digital world is actually the world in which the economy flourishes and decisions are made. A digital layer has covered the classical world, connecting everything to everything and creating "short circuits" in the classical way of life. The above makes it clear that digitalization touches societies deeply, both for the rich and the poor, for rich and poor countries alike. Social-economics shift, labour markets change, technologies threaten people and make some people richer than rich. Should we accept everything that is going on? Can we do anything about it? What can or should governments do? Many questions, but as yet there are too few answers. But whatever the case: we need a different mindset for the digital world.

Includes complete instructions, materials lists, and sample photographs for 18 processes, along with a resource guide and in-depth sections on chemicals, paper, and equipment ... how-to guide to antique and contemporary photo processes -- from daguerreotype to digital.

In this book you will find numerous exercises and paths to bring your ideas to life! ABOUT THE AUTHORS Dorothea Beisser, born and raised in Windsbach, Germany, was drawn to craftsmanship and creative work at a young age. She earned a tailoring apprenticeship diploma in high school and set off to discover the world at 19. She then returned to Nuremberg to earn a two-year master craftsman certificate in fashion and in 1974 took off on a new adventure to Paris, the "Cit  de la Mode". After studying French, she attended the "Guerre Lavigne" fashion school (it became the ESMOD International Fashion School) to expand her

design and patternmaking skills. In 1976, she went to Nice to work for the clothing label "Atmosphere" and returned to Paris in 1979 to work with Frederik Strobel at his design office (they met during her early years in Paris). She began working freelance in 1984 and opened her Paris workshop in 1988. Always ready for new challenges, she returned to Germany to teach at ESMOD International Fashion School's new branch in Munich (opened in 1989) and Berlin (1994). Dorothea Beisser has achieved much during her career and is deeply thankful to her parents, her sister Eva and especially her sister Christiane, who has helped her in both words and deeds for the past 25 years. Vanessa Morin describes her work as progressive, mystic and recognizable. This German-born designer (1985) lived and worked in Paris for a few years before she started designing under her own name. Before that she had a long career path - first exploring various artistic and creative fields before discovering a passion for fashion design. She studied fashion design and pattern making at the ESMOD International Fashion School in Munich where she graduated with the "Prix Createur" in 2007. She also received several other young designer awards in Spain, Beijing, Berlin and Norway and shortly (to no one's surprise) joined the high-end, avant-garde fashion house Damir Doma. In 2012, after five years working with Doma, she returned to Munich to launch the VANESSAMORIN label that she describes as "elaborated, progressive fashion for women with confidence, designed with a devotion to fine elements and precise details". In 2013 she began teaching fashion design to final-year students at the Munich affiliate of her alma mater, ESMOD International Fashion School, and soon became the school's artistic director. This book on fashion illustration, created with Dorothea Beisser, is her way to focus on the beautiful work of ESMOD Munich students and inspire future fashion students worldwide.
